COLLECTION OVERVIEW

# The essentials. Reimagined.

Haircare, illuminated mirrors and styling tools. A coherent point of view for the moments before your guests step out.

GUESTROOM TECHNOLOGY / LITE & PREMIUM

THE ROOM, THROUGH YOUR GUEST'S EYES

# Three product families. One room standard.

A morning routine. The final look in the mirror. The preparations for a memorable evening. These moments are personal, even when the room is not their own.

## Dry.

Give the everyday haircare ritual a deliberate place in the room standard.

## Reflect.

Think about light, reach and the practicality of getting ready together.

## Step out.

Offer a thoughtfully managed styling service for the moments that call for it.

The opportunity is not simply to put more appliances in more rooms. It is to remove a compromise at the point where your guest is preparing to meet the day.

## Design the setup around actual use.

01 / HAIRCARE

# Hairdryers.
# Start with the room.

The essential Lite expression and the signature Premium direction. Choose the room story, then validate the actual product.

## Hairdryer Lite

The everyday room standard.

**Design direction**
Soft-matte shell · Pearl design finish

**Imagined for**
Standard guestrooms, serviced apartments and select-service hotels

## Hairdryer Premium

A different kind of everyday.

**Design direction**
Metal-finish exterior · Graphite or Champagne design finish

**Imagined for**
Signature guestrooms, suites, boutique hotels and resorts

> **A design direction, not a final specification**
>
> Final dimensions, performance, electrical approval and commercial terms must be confirmed on the actual production model. The visual studies are not product certification.

02 / ILLUMINATED MIRRORS

# Illuminated mirrors. Plan the right position.

A freestanding mirror can help a room work beyond the bathroom. Specify the placement, sightline and electrical arrangement together.

## Makeup Mirror Lite

A useful view, wherever they get ready.

**Design direction**
Soft-matte frame and base · Pearl design finish

**Imagined for**
Guestroom desks, compact vanities and dressing areas

## Makeup Mirror Premium

Bring the dressing space into focus.

**Design direction**
Metal-finish frame and base · Graphite or Champagne design finish

**Imagined for**
Suites, dressing tables and premium guestrooms

> **A design direction, not a final specification**
>
> Final dimensions, performance, electrical approval and commercial terms must be confirmed on the actual production model. The visual studies are not product certification.

03 / STYLING TOOLS

# Styling tools.
# Ready on request.

An on-request styling amenity can be more thoughtful than an unused tool in every room. Let guest demand and operational safety define the program.

## Curler Lite

A thoughtful extra, on request.

**Design direction**
Soft-matte handle · Pearl design finish

**Imagined for**
Managed guest lending and event preparation

## Curler Premium

Complete the suite’s styling offer.

**Design direction**
Metal-accented handle · Graphite or Champagne design finish

**Imagined for**
Concierge-led lending, signature suites and event-focused hotels

**A design direction, not a final specification**

Heated tools require exact-model safety approval, written instructions and an operational lending review before guest use. Product features and kit contents remain unverified.

TWO EXPRESSIONS / ONE PHILOSOPHY

# Lite and Premium. Choose the room fit.

Use the collection as a planning system. Lite explores a soft-matte everyday expression; Premium explores a more distinctive metal-finish presence. Neither tier implies a verified performance advantage.

| ROOM / SERVICE | CONSIDERED APPROACH | DECISION TO VALIDATE |
|---|---|---|
| Everyday guestroom | Lite dryer and mirror direction | Placement, usability, care and value |
| Premium room / suite | Premium dryer and mirror direction | Finish fit, guest preference and support |
| On-request styling | A shared Lite or Premium curler pool | Demand, safety, storage and lending routine |
| Multiple properties | A common brief with local configurations | Market approvals, voltage, plug and logistics |

## For the guest

A coherent experience, communicated clearly: what is in the room and what can be requested.

## For the property

A specification that includes handling, cleaning, spares and service—not just appearance.

> **Make room for different routines**
>
> Hair texture, styling habits, eyesight, mobility and trip purpose vary. Evaluate the needs of your own guests rather than assuming one setup is right for everyone.

A THOUGHTFUL PATH TO ROLLOUT

# Start with a defined pilot.

01

## Frame the experience

Map the room categories, guest routines, proposed placement and destination requirements.

02

## Approve the actual model

Review a sample with engineering and housekeeping. Attach technical evidence to the exact configuration.

03

## Run a defined pilot

Measure the guest response alongside service calls, cleaning time and operating issues.

04

## Agree the complete offer

Confirm product revision, quantities, pricing, tax, freight, lead time, warranty and service responsibilities.

05

## Roll out with a record

Keep the approved specification, care instructions, spare pool and feedback loop together.

> **Do not skip the release gates**
>
> Guestroom trials and commercial orders depend on qualified products and market approvals. A concept rendering is not permission to place an unapproved electrical product into service.

AERLOR / HOSPITALITY

# Prepare your property proposal.

Tell us what your property is known for—and what you want the next version of the room to feel like. Build a collection selection, share a project brief, and use the conversation to define the right next step.

## For purchasing

Product selection, quantities, destination, required timing and the terms your team needs to approve.

## For design & operations

Finish direction, room placement, guest routine, care requirements and an evaluation plan.
